PROFESSIONAL SUMMARY

Frontend Engineer with 5+ years shipping production web apps in React.js and Next.js at a Thai tech startup, working as the sole frontend engineer across fintech (KYC, trading, wallet systems), AI SaaS, and e-commerce product lines. Specialized in AI-integrated products using Claude/OpenAI APIs and n8n automation. Promoted from Junior to mid-level; comfortable owning frontend architecture and delivery end-to-end in fast-paced startup environments.

WORK EXPERIENCE

Frontend Engineer — DEV DOGDOG CO., LTD. Mar 2021 – Present

Promoted from Junior • Sole frontend engineer • Tech startup • Fintech, AI SaaS & E-Commerce

- Sole frontend engineer responsible for architecture, development, and delivery of production Next.js/React applications across three product domains simultaneously — fintech, AI SaaS, and e-commerce.
- Owned all frontend decision-making end-to-end — API integration, state management (Redux, Zustand, React Query), form validation, and reusable UI components — with no dedicated frontend team to delegate to.
- Independently integrated Claude/OpenAI LLM APIs and built n8n automation pipelines, leveraging Claude Code and GitHub Copilot to offset limited team bandwidth and keep sprint delivery on schedule.
- Served as the sole point of contact between design, backend, and product stakeholders (via JIRA/Confluence) for all frontend-related decisions and cross-layer debugging.

SELECTED PROJECT HIGHLIGHTS

Crypto / Financial Exchange Web Platform

- Single-handedly architected and shipped 10+ production Next.js modules (trading/convert, wallet, deposit/withdrawal, fiat/OTC), integrated with live APIs, as the only frontend engineer on the project.
- Independently built secure auth-aware routing, access/refresh-token handling, KYC flows, and 2FA/OTP — critical security features designed and maintained without a second frontend reviewer.
- Solely designed and shipped full Thai/English i18n via Next.js App Router, expanding platform reach to English-speaking users.

AI-Powered Web Console (SaaS Product)

- Built chatbot configuration UI, knowledge management screens, billing dashboards, and real-time SSE/WebSocket updates single-handedly, from concept to production.
- Contributed to a shared pnpm + Turborepo component library, maintaining consistency across the product suite despite being the sole frontend contributor.

Bilingual E-Commerce & Automation

- Independently built and shipped the entire storefront — catalog, cart, checkout, flash sales, reseller/commission logic — from CMS integration through unit testing.
- Self-hosted and maintained n8n on Docker without support, building LLM-to-web-service automation pipelines end-to-end.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

State/Data: React Query, Redux, RTK Query, Zustand, Context API, Axios, RESTful APIs

UI: Tailwind CSS, Ant Design, Material UI, Radix UI, Bootstrap, Styled-components

AI/LLM: Claude API, OpenAI API, Prompt Design, n8n Automation, AI-assisted Dev

Backend/CMS: Node.js, Golang, PHP/WordPress, Directus

Tools: Git, Docker, pnpm, Turborepo, Vitest, Postman, JIRA, Confluence

EDUCATION & LANGUAGES

B.Sc. Information Technology — Surindra Rajabhat University

2016 – 2020

Thai — Native • English — Working Proficiency
